About us

Cryptocurrency trading happens when you buy or sell digital currencies with the aim of making a profit from the changing value of the underlying asset. Crypto trading is different from investing directly in a cryptocurrency.

Cryptocurrency trading is the act of speculating on cryptocurrency price movements via a CFD trading account, or buying and selling the underlying coins via an exchange.

what is cryptocurrency

Cryptocurrency is a digital currency that uses encryption algorithms to function as a virtual accounting system and a currency. It's a form of payment that allows people to make direct transactions with each other online. Cryptocurrencies are digital tokens. They are a type of digital currency that allows people to make payments directly to each other through an online system. Cryptocurrencies have no legislated or intrinsic value; they are simply worth what people are willing to pay for them in the market.

What is Forex Trading

Forex trading, also known as foreign exchange or FX trading, is the conversion of one currency into another. FX is one of the most actively traded markets in the world, with individuals, companies and banks carrying out around \$6.6 trillion worth of forex transactions every single day. Currency pair: Every Forex transaction is an exchange of one currency for another. A currency pair quote looks like this: $\text{USD/GBP} = \$1.15$. In this example, the U.S. dollar is the base currency, and the British pound is the quote currency. A trader who wishes to buy British pounds will pay \$1.15 for each.
